Beer Recipe Tracker

Scope of Work:

- Homebrewers of the world unite! What to do with those last few grams of Centennial Hops in your fridge? The dregs of Champagne yeast will haunt you forever! We want an app that lets us use up the beer ingredients we have left over from past brew days. We want to be able to keep track of the recipes we have made and make notes on them.

Requirements

- Use the Punk API (<https://punkapi.com/documentation/v2>)
- Select one or more ingredients (hops, malt or yeast) that you have left over in your beer making supply cupboard
- The app will suggest some recipes for you to make with those ingredients
- The app will be able to suggest options that have some of those ingredients if not all of the ingredients
- Once you have selected a recipe to try - the user can save it to a recipe book where they can make notes on it (ie whether you followed the recipe exactly, date brewed, what they thought of the final brew)

Extras

- Suggest recipes to pair with this beer from the Yummly API
- Allow the user to sign in to save the recipes to their specific profile

Deadline:

- Wireframes by Wednesday
- Beta by Friday
- Final by the following Wednesday

Deliverables:

- Project up on GitHub
- Project live at URL (can be gh-pages URL)
