▸_ Client Brief

Bad Wine Finder

Scope of Work:

- I'm interested in the cheapest / best deal on wine available at my local LCBO, because I am going to mull that wine in the winter or make it into bootleg sangria in the summer.

Requirements

- Must use the LCBO API https://lcboapi.com/docs/
- App must look modern and classy
- Users must select a price range (no more than $22)
- Users *can* select wine color (but don't have to)
- With these parameters, users are returned a list of possible wines to buy
- If the wine is on sale, and that's why it's under the $22 price point, that should be clear to the user
- The price per litre should be clear to the user
- Users can find the closest LCBO to them that has that wine

Extras

- Users can save their favorite bad wines
- Suggestions of which other alcohols, juices, or spices to mix with that garbage wine for a sangria-ish or mulled effect
- Users can leave notes or reviews for the wines they've bought
- Users can search for the lowest cost to alcohol content ratio

Deadline:

- Wireframes by Wednesday
- Beta by Friday
- Final by the following Wednesday

Deliverables:

- Project up on GitHub
- Project live at URL (can be gh-pages URL)
