Client Brief

DinnerSafe

Scope of Work:

- Love having friends over that have dietary restrictions, but hate it when you accidentally send them to the hospital out of negligence? Same here!
- I want you to use Firebase to let users create an account (no authentication, data is open to everyone) and add any guests or family members with dietary restrictions, and use the Yummly API to find recipes that can be eaten by everyone at your dinner party. Bone apple tea!

Requirements

- Use Firebase to store user data
- Use Yummly api to get recipes based on dietary restrictions
- User should be able to save separate party guest lists, and safe recipes for each list of guests

Deadline:

- Wireframes by Wednesday
- Beta by Friday
- Final by the following Wednesday

Deliverables:

- Project up on GitHub
- Project live at URL (can be gh-pages URL)
